## Robopon 2: Ring Version Link Spark List

by V Jasper

Updated to v1.1 on Jul 6, 2010

This walkthrough was originally written for Robopon 2: Ring Version on the GBA, but the walkthrough is still applicable to the GBA version of the game.

- + See a complete list of all of the link sparks! Search for the text [LKSP]
- + Find all the ways to spark a certain Robopon! Search for the Robopon's name
- + See a complete list of all of the batteries!
  . (except Sun, Moon, and Ion)
  Search for the text [BTLT]
- + See a list of the Robopon that can't be sparked! Search for the text [EPTN]

## Version History

- + Version 1.1 (Current)
  Minor tweaks
- + Version 1.0
  Release version

## Introduction

This guide came from a desire I had a couple of years ago to conclusively test each and every battery combination in the Robopon 2 games, primarily for my own edification. The pure size of the task made it appear impossible, however countless episodes of Gilmore Girls later, here we are.

First, what is Link Sparking? In both Robopon 2 versions, Robopon are created by combining batteries. This really doesn't make a ton of sense, and I really wish I have some kind of insight into the whole thing, but I am but a man. It is possible, on a single game, to combine two batteries like this, however when two games are linked up together, four batteries can be combined. These two battery combinations are referred to as "Sparking", and similarly the four battery combinations are called "Link Sparking".

When starting this guide, the question arose as to just how many different combinations I was going to need to do in order to actually make it comprehensive. Throughout each game there are a total of twenty different kinds of batteries to find, and there are many copies of each kind. Therefore, I needed to know how many combinations of two and four batteries there were, when there were twenty things to choose from, where each kind could be chosen multiple times, and finally where the order did not matter.

For those of you less mathematically inclined, this is the number of "combinations" (meaning the order does not matter) of twenty objects "choose" two or four, with repetition.

http://en.wikipedia.org/wiki/Combinations
#Number\_of\_combinations\_with\_repetition

For normal sparks, this is (20 \* 21) / (1 \* 2)= 210

The normal sparks were easy enough to do, as 210 is not that many, however link sparks seemed ridiculous.

What really saved me, however, was the fact that both games have three "starter" batteries, Moon, Sun, and Ion, which can be combined to create the three starting Robopon in each games. These three batteries, however, cannot be normal sparked to create anything else; they are there solely to be combined with each other in order to create your starting robot.

Using that idea, it seemed pointless to try to link spark these three batteries, because there is really no chance that they could make anything else. Under this assumption, that three of these batteries are useless, we reduced the problem to testing 17 batteries instead of 20.

After coming up with this number, and deciding that I would at least try it, I created a small program that took in a list of the 17 batteries I was going to use and popped out a text file containing all of the different combinations. After that, I slowly filled in each of the 4845 entries.

I did the same thing with the normal sparks and they are included here for your convenience, however the meat of this package is the Link Sparks. I cannot guarantee that everything is 110%, however if you notice any problems please email me at valt\_jasper@earthlink.net and I will try to fix it immediately.

Information on Sparking

First of all, almost all Robopon can be link sparked at levels 1, 5, 10, 15, and 20. There are only three exceptions to this standard... [EPTN]

- + Nebulus can only be link sparked at level 1, and this is the only way to acquire him.
- + Icarus and Bigzap must be enhanced from their previous forms, and cannot be sparked.

No Robopon are unobtainable in either version of the game if both link sparking and enhancing are used as methods to obtain them, however link sparking is needed for most pons, therefore two game cartridges are required.

Normal Sparks

Normal sparking can be done using only one game, which makes it very tidy. Normal sparking is the only way to spark Robopon at levels 25 and 30, and there are only a few combinations that do this (link sparking only sparks pons at levels 1, 5, 10, 15, and 20).

[LV25]

[LV30]

These rare combinations are...

SSTBot, level 25, Ultra + Ultra
Gidyup, level 25, Alkali + Alkali
Mariner, level 25, Super + Cyber
Centaur, level 25, Hyper + Cyber
B-Mani, level 25, NiCD + Cyber
Desutro, level 25, Cool + Ultra
Storm, level 25, Silver + Cyber
Skeeto, level 25, Gold + Ultra
GGTBot, level 25, Gold + Alkali
Ruby, level 25, Noble + Cyber
Train, level 25, Tough + Ultra
Musashi, level 25, Cyber + Ultra
Zap, level 25, Ultra + Alkali

Fujipon, level 30, Mangan + Alkali Merr-O, level 30, Silver + Alkali Minotor, level 30, Tough + Alkali A-Grav9, level 30, Wild + Alkali

Batteries are found in the game roughly in the order they're listed in this guide (disregarding the three starting batteries, which are trivial to acquire). That order is...

Normal [BTLT]

Super

Hyper

Mild

Mangan

NiCD

Star

Air

Cool

Silver

Gold

Noble

Tough

Wild

Cyber

Ultra Alkali

It is interesting to note that all of the level 25 sparks require at least one Cyber, Ultra, or Alkali battery to

```
spark, and all of the level 30 sparks take an Alkali battery.
```

Almost all Robopon can be sparked at level 20 using link sparking, however because many of you don't have two games, I have made a list of all of the normal sparks that give level 20 pons. The asterisks show the earliest obtainable Robopon at level 20 (due to the locations of their batteries).

```
Super + Noble = Sherman (20) *
                                                   [LV20]
 Mild + Tough = KingPon (20)
 Mangan + Noble = Tomuhok (20) *
 Mangan + Ultra = Dynamit (20)
 Mangan + Alkali = Fujipon (20)
 NiCD + Tough = Kimera (20)
 Air
      + Wild = Filimen (20)
 Silver + Noble = Filrup (20) *
 Noble + Ultra = El Seed (20)
 Wild + Cyber = Pirate (20)
Similarly, here are the level 15s...
                                                   [LV15]
 Normal + Silver = Kogal (15)
 Normal + Gold = Racer (15)
 Super + Cool = Pengski (15)
 Hyper + Silver = Trigger (15)
 Mild + Cool = Tuten (15)
 Mild + Gold = Lil'Goo (15)
 Mangan + Silver = Dot (15)
 NiCD + Cool = Elepon (15)
 NiCD + Gold = Octopon (15)
 Star + Cool = RushBox (15)
 Star + Gold = Viper2 (15)
 Star + Noble = Crysty (15)
 Air + Silver = Thief (15)
 Cool + Silver = Vic (15)
 Cool + Gold = Cambot (15)
 Cool + Tough = NitBoat (15)
Normal Spark Lists
Format:
Batt + Batt = Pon Name (Level)
///1 is a failed Spark (Bulbot/Gear).
Icarus and Bigzap have no sparks.
Nebulus canonly be sparked at level 1.
