[Intro]

I.Introduction:

Welcome to My Last Ranker Guide :D. Well This is my first time I submit a walkthrough for gamefaqs and other sites as well. Sorry if there are grammar mistakes and some Typo (_ _). I made this because, I think this is a great game and I want to make people that didn't understand Japanese can play this great game.

Well,I complete this guide while I am studying for exam lol. I myself didn't believe it I can complete this guide in the middle of my midterm exam. I hope there won't be many mistakes because the confusion between exam and gaming.

Don't forgot to check my blog for people who wants to help me completing the guide. May be there is something that I already find later on but I have no time to post it to the hosting sites. Check my blog before emailing if you find something,thanks for the help in advance.

Enjoy the game folks :D

Note: Some Item I translated my self with help of google translate to prevent JIS type Faq and some are using my translation. I made this guide while playing for the first time so until I played it for the 2nd time,there will be some mistake and translation fixes.

Author : Julyanto Wijaya

Version : 1.05

Change log:

0.17 Creating My first FAQ (09/10/2010)

0.20 Minor translation fixes and added Chapter 2 (10/10/2010)

0.33 Minor typo and area name fixes and added Chapter 3 (11/10/2010)

0.50 Added Item section on table and added Chapter 4 also

another website where I submit this walkthrough. Though it hasn't been

from nowhere just like old final fantasy series. When fighting the enemies your top right of the screen shows your HP gauge and it's number. Below the HP gauge there is SP gauge. SP gauge is a diamond shaped gauge. Each diamond represents 1 SP. On top of your enemy's head is His/Her/It's HP gauge.

When your HP gauge is fully depleted is a gameover except if you retry the fight or start it over from Camp menu so you can edit your skill to suits the enemy if you forgot to edit your Skill nest before the battle or Load from your last save point. So save often.

The Leveling system here is like another RPG by fighting enemies and got experiences upon winning. Unlike other RPG you can't use items in the middle of the battle you only can used it outside the battle. Thus you should depend on your Skills to heal and beat enemies before all of your HP and RSkills runs out.

=====
Battle system
=====

As for Battle system it's called Direct button attack. When you pushed a button the corresponding action will be done immediately. The battle is a real time battle. Use timing to chain a combo or guarding. These action limited by your SP remember that.

You can use countering and guarding like the other Action RPGs normally you got to do that at the right timing. Also if you cast a RSkill then enemy do Rskill to you before you complete your Rskil cast, your Rskill will be cancelled and depleted by one and it works vice versa.

=====
Status effects
=====

There are some status effects that can helps you or makes you irritated when being hit with them. Here is the lists:

Status Buff:

- Regen : Regenerate Hp every turn
- Wall : Enabling you to hit enemies even when you're being countered
- Atk UP: Boost attack power
- Def UP: Boost defense
- Hp Drain: All attacks absorb enemies HP

Bad Status:

- Poison : Taking damage every turn like a reverse regen
- Paralyze : Disabling you when you try to attack or use skills and cancel your attacks or skills. SP gauge and R Skills counter won't be depleted.
- Sealed : Seal action buttons, R skills that corresponds with that buttons also sealed
- Break Down: Deplete target's Break Gauge every second
- HP Down : Deplete target's HP every second
- Atk Down : Reduce target's attack strength

- Def Down : Reduce target's defense

=====
Break gauge
=====

Later, you will learn to Breaking your enemy's break gauge. You can break your enemies break gauge only if your opponent is a ranker. Normal enemies doesn't have a break gauge. The break gauge shown at the lower part of the screen. Your break gauge color is blue and your enemies is red. You will notice there is a diamond shaped thing on your break gauge. It's function is to indicate how close are you into a break state.

If your break gauge already over the diamond shaped marker and your gauge hasn't broke yet, the break gauge will refill itself until it reach the diamond shaped marker. The more you survive break state on one battle, the longer the diamond shaped marker will become and makes enemies harder to break you because they should deplete your gauge before it refills to the diamond marker. Remember this break system exists for all rankers so your enemies have the same capability as you the more they got their break gauge depleted, the harder for you to break their gauge.

When anyone enters a break state (a state when your break gauge is depleted to 0) they will be rendered vulnerable, can't do anything and all of enemies attacks that hits became a Critical hit (about 2 X Normal damage) until the break gauge refills itself to the MAX.

=====
Skill nest
=====

Skill nest grows when your leveled up so the higher your level are, the more slots for you to equip the skillchips. You usually got your skill chips from winning a duel with another ranker. For further explanation about Skillchips type, function and systems go to Skill chips section.

=====
Style Change
=====

Style Change is a special feature on this game. You can equip 2 style at maximum. One is an Active style and the other is Sub style. For information regarding styles and what it's effect see at Style change section.

=====
Map Symbols:
=====

There are 4 symbols that you must pay attention on the map
Red arrow = Crystal enemies/usually called an Evinos
Blue arrow = A Ranker
A Yellow blue Circle = entrance to an area
A Box with a hole in it = A town/dungeon

=====
Friendship event
=====

You don't have to do all of the friendship event here. The reason

there are so many friendship event is to give player chance if player give a bad answer or only good answer or missing the event. Don't worry I gave you the best answers here. You should got the item after 2-3 events at max.

Tips:

- Be sure to remember location and name on the maps because usually I will only tell how to get to that location once and next time you want to go there and forgot where they are use CTRL + F function.
- Use Guard and Status Boosting Rskills
- Use different Attack Rskills for different Style
- Always Use Mystery Skills after all or Important R skills runs out
- Sell some Evinos Material usually listed at the lowest part of Useable item list marked by Item sign [a bottle filled symbol]
- Heal yourself and Safe often because sometimes, I won't tell you when to save and if you get a gameover, I am sure that's annoying.
- Upgrade your skills and Customize your skill often. Kinda obvious because the game won't add your skills automatically to your Skill nest.
- It doesn't matter which Friendship event you do first as long as you got them. My friend protesting me that he got Rid event first before Makis while I got Makis first before Rid.
- You should see a Japanese writing with the same symbol when you are near people that can do a friendship thingy with you. See the character beside the Square symbol, it should be the same with your key japanese writings. To check whether you have the key thingy or not, open the camp menu, press right once and check the lowest item and compare the writings.

I want to check this if this is right or not:

My friends experienced a change in time to do friendship event. If you missed one friendship event may be the option for the next event will be screwed up and the time to do friendship event may change. I hope someone can give me information regarding this.

When His Hp below 10% He will cast a very dangerous spell that deplete HP and your Break gauge very fast. At this time use the last Double edge if there is any and Cast a Mystery skill before he finished to cast a very damaging skills that one hit K.O you since you are in a Break down state and HP down state.

Ring Name Code:

- Bayger : ByeByeSenpai
- Sengoku: MurakumoKen3
- Norma: The Beauty Dog
- Zebrila: Dooh!GoGoGo!
- Rosa: Steel&Maiden
- Yuri: BaseInstinct
- Harth: 1MoreBattle!

As for Battle Strategy I only found some that I've beaten when this section was made. More Battle strategies will come up later.

If anyone wants to deploy his/her strategy to me feel free to email me and your name will be on the Credits for the tips (not the same strategy with me).

Bayger The Ironic Punch Line [24522]

=====
Best Style Change: Guard and Break style

Skill set for Guard style: Cooldown, Armor Kill, Powerful, Healing

Skill set for Break style: Chakring, Retaliate Damage/Tiger Palm, Healing and Double edge.

Mystery skill: Anything should be fine.

Skill + 1 linked to Double Edge/Tiger Palm is giving better chance to win.

Tips: Use your Guard style as your Main style. He will cast HP down to you but there is a way that I found recently to counter this. Use O button on Guard style. O Shield Guard gives you invincibility against this status and for other status.

Step 1:

At the beginning of the battle press O after you see he is in front of you and moving hands. Immediately Change into Break style and cast Armor Killer and Powerful, continued by a Square hit to him.

Step 2:

Don't ever change your style at this moment because Bayger can deplete your Break Gauge very fast if you're not using O Shield guard in Guard Style. After your SP regenerate by about 2 or 3, immediately Press O

to guard his attacks keep doing so until your SP fully regenerated.

Step 3:

Change into Break style and hit him with O Knuckle Blow twice to deplete his break gauge and immediately change into Guard style to Cast Cooldown on you and back to Step 2. Be careful at this step he usually cast a Hp down to you so be sure to O Shield Guard your self.

Step 4:

Change back to Break style and hit him with O Knuckle Blow to break him and spam your Double Edge to him.

Repeat this step until His Hp below 30% and Spam all of your R skills and be sure to return to Guard style to safely regenerate SP and cast Cooldown when needed. After you spam all of your Damaging R skills Finish Him with a Mystery skill and He will use his mystery skill. Be sure to counter his Mystery skill and that's it. He is beaten.

Note: You can switch O Knuckle Blow with a Tiger palm to make things easier. But for your safety don't use Tiger palm because he can counter your attacks.

Prize: Fist arts mastery certificate.

=====

Sengoku the Scenery Slicer [6]

=====

Best Style Change: Attack and Break style

Skill set for Attack style: Armor Kill, Weapon Kill, Powerful, Healing and Grand tusk Mystery skill.

Skill set for Break style : Draining Fist, Double Edge, Healing and Tiger Palm.

Skill + 1 linked to Double Edge/Tiger Palm is giving better chance to win.

Tips: He hits very2 hard if you're not guarding his attacks. He also can use a One winged angel like attack that make your HP to 1.

Use Break style as your active style. To use Powerful or not it is your choice. Though i can beat him without powerful.

Here is the strategy cast Draining fist and hit him immediately with O Knuckle blow. Guard his attacks and Rskills this is a must. Break him and use Double Edge and continue by using Armor killer to him. He is hard to counter except you know the right time to do it so I don't recommend you to use Retaliate Damage.

Don't ever use Healing on yourself if your HP is not equal to 1. Because if you heal then he hits your HP to 1 you will use Healing twice before he hits you to 1 HP and after he hits you to 1 HP. Just cast Draining fist and hit him that's it.

Repeat these actions until His HP is about 30% try to Break him and spam Double Damage once again and Armor Kill after this. After your SP is depleted wait to regenerate and don't use Guard at all except your HP is almost 0. If not spam your Grand Tusk to finish him off.

I told you to use Grand Tusk because of the same reason when fighting Harth below.

Note: You can switch O Knuckle Blows combo with 2 Knuckle blow and a Tiger palm.

Prize: Mountain collapsing Sword II certificate.

=====

Norma plays with charm.[5]

=====

Best Style Change: Any style and Break style

Skill set for Break style: Draining fist,Tiger palm, Healing and Double edge.

For the other style you should use Hagane soul and some optional RSkills: Armor kill,Weapon kill and Powerful. Though i suggest to use attack style.

Mystery Skill: No need to use one i think.

Tips: Use Hagane Soul and Armor kill. Then change into Break style and cast Draining fist with your first set of SP. Now you can hit her without worrying you'll be cancelled by her counter. She is easy to beat with Knuckle Blow,Tiger Palm and Double edge after she enters a break state. Just Repeat this actions until she dies, her defense is not high, I think she has a below average defense. Heal when necessary.

Prize: Bewitching Beauty spell certificate

=====

Everything is in Zebrila's Hand [4]

=====

Best Style Change: Any style and Break style

Skill set for Break style: Draining fist,Tiger palm, Healing and Double edge.

For the other style i suggest use Armor kill,Weapon kill and Powerful.

Mystery skill: Anything should be fine.

Skill + 1 linked to Double Edge is giving better chance to win.

Tips: After the battle starts sse Draining fist and Hit Zebrila. He doesn't have a Break gauge but the main function of Draining fist here is to drain His HP. Spam Double Edge + powerful/Armor kill to him and keep spamming until your HP is at the red zone. Heal your self and continue to spam all of your R skills until his HP is about 1 and use Mystery skill to you and counter that.

As a note for you: don't waste your time to hit those Gun turrets just hit Zebrila. Neglect them and hit Zebrila.

Prize: Dou's desktop certificate.

=====

The Unerring Justice of Rosa [3]

=====
Best Style Change: Guard and Break style

Skill set for Guard style: Cooldown, Armor Kill, Defense, Healing

Skill set for Break style: Draining fist, Tiger Palm, Healing and
Double edge.

Double Edge linked with Skill + 1 is a must.

Tips: Immediately cast Defense you should do this after she use StarFall.
Unlike before when you fight her, Her Starfall is infinite.
After casting Defense change into Break style. Hit with knuckle blow
twice and don't use Tiger Palm yet. Change back into Guard style ASAP
and press O for shield Guard this is a must.

Wait for your SP to regenerate by 2 or 3 and press O again. If the 2nd
Starfall can't be avoided, cast Cooldown when your SP full and Guard
again. Hit her with 3 Knuckle Blow as soon as the starfall finished
and use Double edge once and save your SP wait it until regenerate
fully.

As soon as she recover from Break State immediately Spam Double knuckle
blow continued by Tiger Palm. This should break her once again and
repeat these action once again. After hitting Her with Double Edge
for the 3rd time, wait for your SP to fully regenerate and hit her with
1 More Double Edge, change into Guard Style and Hit Her with armor kill.
Her Hp should be at < 15% by now and immediately cast Mystery Skill
when you have 3 SP bars.

Prize: Balance of the Light Bow certificate
=====

Yuli Blan Bazalta[5]

=====
Best Style Change: Any style and Break style

Skill set for Break style: Draining fist, Tiger palm, Healing and
Double edge.

For the other style you should use Hagane soul and some optional RSkills:
Armor kill, Weapon kill and Powerful. Though i suggest to use attack style.

Mystery Skill: No need to use one i think.

Tips: Use Hagane Soul and Armor kill then change into Break style and cast
Draining fist with your first set of SP. Now you can hit him without
worrying you'll be cancelled by his ice attacks.

Now use Knuckle Blow, Tiger Palm and followed by Double Edge when
he enters break state. Just Repeat this actions until his HP is about
15% then Hit him with all Rskills you have, and followed by a Mystery
Skill.

Prize: Absolute Zero certificate

Harth the Strong Rank [2]

=====
Best Style Change: Attack and Break style

Skill set for Attack style: Armor Kill, Weapon Kill, Powerful, Healing and Grand tusk Mystery skill.

Skill set for Break style: Draining Fist, Retaliate Damage/Tiger palm, Healing and Double edge.

Skill + 1 linked to Double Edge/Tiger Palm is giving better chance to win.

There are 2 strategy for this fight well it's almost the same. Just using 2 different skills and some change in SP set. Tips 2 is safer than the first tips since it use weapon kill to reduce Harth's attack.

Tips: If your level is about 39 you should do this strategy. I KO'ed him without using Grand Tusk with this strategy. Grand tusk's function here is just to do a cool finishing and a guaranteed finishing & winning ;D

Immediately cast Powerful and Armor Kill when the battle begin. Then change into Break Style and cast Draining Fist with your first set of SP. Regenerate your SP and Hit him with Knuckle Blow twice continued by a Tiger Palm. He should be entering a break state by now.

Spam Double Edge now to gave him about 5000 Damage for each hit. Don't do anything with your 7 SP, wait your SP to regenerate instead. After he recovers from his break state Hit Him again with Knuckle Blow twice and continue with Tiger Palm once again. He should be entering a break state again now. Spam Double Edge once again and switch into Attack style to cast Armor Kill.

Spam your last Double edge or 2 Double edge skills if you linked it to skill + 1. His Hp should be about 10% and he will cast a Break down and HP down to you then he attacks you. Guard it and as soon as his attacks finished, hit him with anything you have left. For a guaranteed or succesful attempts to make his HP 1, Grand Tusk is a sure method to give you a great finishing ;D. So hit him with your last 2 Rskills and use your last 3 bars of SP to use Grand Tusk. He will use a mystery skill at the end, counter his mystery skill by pressing O button repeatedly and that's it. He is KO'ed.

Tips2: Use Weapon Kill and Armor Kill to him and then use Powerful at your first set of SP. Regenerate your SP until it's maxed.

Use Draining Fist and O attacks. Be on guard when he attacks and keep guarding. When he jumps to no where and suddenly attacks you from the sky. Try to keep your Hp Higher than 2000 because that Diving attacks cause about 1800-1900 damage if guarded.

Now after he is back on the ground immediately Break Him and spam your Rskill: Double edge to him. It should do about 3000-4000 damage each. Change into Attack style and keep using the same strategy until his Hp about 30%.

When his HP about 30% left, Spam all of your damaging Rskills that you have left. You know why I told you to spam all? Because he will do a Rskill to you that can Break your Break gauge and HP Down about at this

time your break gauge is also almost depleted thus you have a great chance to be rendered vulnerable at the same time and get K.O-ed.

To avoid this, cancel his R skill by spamming yours or force him to skip this phase by hitting him by all of your RSkills until His Hp below 15%.

Don't forgot to Heal your self and Spam Grand Tusk Mystery skill to end him. After that you'll be prompted to do a Mystery skill counter.

Note:

I told you to spam Grand Tusk incase if his Hp is not depleted to 1 after casting Grand Tusk. Grand Tusk gave you a temporary attack boost after casting ,so you can hit him with your O attacks if his HP still left about several hundreds. He will cast a RSkill that can cause a HP down,Break down status to you. So you should beat him before your HP at the Red zone and your Break gauge is near a Diamond marker.

Prize: Last Ranker Title certificate.

=====

You will got a certificate upon your winning and that can't be used to do anything. This certificates are just for show off.

Skill + 1 linked to Double Edge is more preferable

III.Skill Chips: ===== [skch0]

Skill chips is used to boost your stats or to use when you fight.

You equip them from camp menu. Open the skill menu. You will see some boxes.

That is your skill nest. Skill nest grows as your level grows.All of your

skills that you can equipped divided into several catogeries below.

Note:You also can equip different skill chips for different Style.

Command Skills ===== [skchc]

This is a command that's you will usually use inside the battle.

You can do this move as much as you want,as long as you have SP and HP

of course lol.

Button list in Attack mode (Normal mode):

Square = always costs 2 SP

Circle = always costs 3 SP

Triangle = Usually costs 5 SP, If you use Triangle counter it only costs 3 SP

Cross/X = always costs 1 SP per hit received when guarding

Command Skill Chips list:

Command Name:	Explanation
Square Attack	Normal attack.
Square Break Attack	First attack using square will deplete enemy break gauge.
Square Damage+	Raise the damage used by sword attacks.
Triangle Attack	Normal Triangle attack 5 SP.

R Skills ===== [skchr]

This one has a limited moves usage, so be careful when you use one. It's like Suikoden's Rune system if you have played Suikoden series. To see the limit how many it can be used, Hold R button when battling you will see some number beside R skills name. That's your counter or limit or how much times left it can be used.

Example:

RSkills name X 3

it means you can use that R skills until 3 more times.

The counter will be depleted by 1 each time you used that skills

To restore this counter use Charge items.

R Skills will always use 3 SP to perform. Hold R button when battling and see the Right part to perform Rskills that you equipped. You are also limited to only have maximum 4 R skills to equip. You only can have 1 skill for each O, Triangle, Square and X button. so you only can use 4 types of different R Skills for a single Style.

There is one more thing about this.

Example:

You have Power edge Rskill equipped at your attack style and you also equip them at your Break style.

```
Power edge      3
Attack style    -1
Break style     -1
=====
Power edge      1
```

You use Power edge 1 X when you are using attack style, then you changed into Break style and use Power edge once again.

Your Power edge counter will be decreased to 1. So different Style with the same Rskills share the same counter.

V.Style change =====[styl0]

Style change has it's own advantages. You only can use 2 Style at the same time. One is Main/Active style and the second is the Sub style. At first you only Have attack style, but later as the game progres you'll got 3 more style. Here is the list and how to obtain them.

Attack style: Automatically from the beginning of the game.

Break style: When you enter Libra forest at the very first time.

Guard Style: After you fight Torrens at Virgo desert.

Shoot style: After Fighting Galgano at Leon Canyon.

Attack style =====[styl1]

Attack style is a normal style with great damage and good speed.I think this is the best style in this game. Attack style also is the best damage disher that you have. You will use this style most of the time because you use this style to fight random enemies. This style also is the best style to chain attacks into a combo with O button to do multiple hits.

Rskills thats very suitable to use: Double Edge,Armor Kill,Weapon Kill
Healing

Break style =====[styl2]

Break style is a focused style to deplete Ranker's break gauge. I thought of this style as a Ranker Killer style. It's easily breaks enemy's break gauge with O Knuckle blow about six hits from this style's Knuckle blow command can make a ranker rendered vulnerable. You will equip this as a Sub style

most of the time to fight some rankers that you met on your journey.

Rskills thats very suitable to use: Double Edge,Retaliate Damage,Draining
fist

Guard style =====[styl3]

Guard style is a focused style to defend your self from a Break style enemies type. With O shield guard command, you can guard yourself without using any SP. When using this command your guard command also reduced more damage than other style's guard command. It's also reduce the damage that you received from Breaking type attacks. You will need this style when fighting some bosses.

Rskills thats very suitable to use: Armor Kill,Weapon Kill,Cooldown,
Dynamite.

Shoot style =====[styl4]

Honestly,I think this style as an useless style. This style have the best speed than other Change style but it's damage is like a crap. You can act as soon as you have SP in this form whether you are attacked or being hit by R skill. Well but there is a compensation for your super speed attack that is your defense and damage.

For me this style main function is not to shoot the enemies in a fast pace but it's used to avoid enemies that mostly use counter attacks or wait for enemies to attack then counter them, though I never use it to avoid counter and use Hagane soul on Attack mode/Break mode against those enemies.

Note: Triangle countering skill and great timing when using this style is definitely needed.

Rskills thats suitable to use: Hellfire,SniPNG,BenomaSHT
