=====  
Introduction (IN)  
=====

Until now, I haven't had a good way to calculate the experience levels. The amount of experience points needed goes up extremely quickly in the 50s, so going above that is difficult. However, with a cheat device, you can set the level of the Digimon directly and then calculate the difference to reach the next level. Yay, Math!

=====

Introduction (END)

=====

The most experience you can get in Tera Domain is 1544 from one battle. It would take 2105 battles to get to level 99, ignoring the fact that you have to DNA Digivolve a bunch of times before being able to get to a max level of 99. With DNA digivolving, I wouldn't be surprised if you needed 10x this amount, so probably 20000+ battles with the highest experience point battle. If each battle took you 30 seconds, it would take over 166 hours to get one Digimon to level 99, assuming 20000 battles...

The average experience points you get from a Tera Domain battle is probably around 750. This would result in 4335 battles to get to level 99.

I hope everyone realizes that level 99 is not something to aspire to after seeing this! :)
