Here are the basics:

HP Equation Info:

^ = means that the value is squared.

x = of monster

Example: Adel at 11 -- 1000(11) + 5000 = 16000 Hp. Its base experience algorithm is usually very simple.

NOTE: This is just the base exp. Actual exp is influenced based on the characters, the average of the party, if a GF was used, and who inflicted the final blow to the monster. All of which if were to be mapped out in a FAQ with all different possibilities, it'd be about 8 megabytes and I'm not typing that much.
