

tactics for maximizing your score.

Assuming that you've played the game before, you'll probably want to skip right to the puzzle solutions, or more likely the solution to a particular puzzle that is pestering you. In order to list the puzzles, I have had to devise some sort of logical ordering system. In this solutions guide, they are listed first by size, then based on the arrangement of Qubes in the front row of the puzzle, where each type of Qube (forbidden, advantage, and normal) is given a number value as follows:

```
Forbidden Qube (black) = '0'
Normal Qube = '1'
Advantage Qube (green) = '2'
```

To illustrate this, use the following example puzzle:

```
[_][_][_][_]      [_] = Normal Qube
[_][_][*][_]      [X] = Forbidden Qube
[X][*][X][_]      [*] = Advantage Qube
```

This puzzle would be classified as '4x3 Puzzle 0201'. (The wise player will of course know that the "front" row refers to the bottom one, as the puzzle approaches you on the playing field.)

The basic format for all puzzle listings will be:

```
'A'x'B' Puzzle '####'
```

```
where A = width of puzzle (number of Qubes from left to right)
      B = depth of puzzle (number of Qubes from top to bottom)
      #### = coded order of blocks in the first row.
```

So you can search for your puzzle by pressing Ctrl-f and entering the appropriate listing number.

In cases where more than one puzzle of the same size have identical front rows, the second row will be coded and listed also, in the format ####-####. For example,

```
4x3 Puzzle 1101-1210      vs.      4x3 Puzzle 1101-2111
-----
  [_][_][_][X]          [][*][_][X]
  [_][*][_][X]          [*][_][_][_]
  [_][_][X][_]          [][_][X][_]
-----
```

This type of duplication of front rows will occur more frequently in the smaller puzzles. If necessary, coding for the third and subsequent rows will be included to completely differentiate each puzzle.

Using this coding, the puzzles can be listed in order, which again is based on puzzle size (width, then depth), then numerical code. So for example, this list is in the proper order:

```
4x2 Puzzle 0121
4x2 Puzzle 0122
5x8 Puzzle 22200
6x6 Puzzle 112121
6x8 Puzzle 011121
6x8 Puzzle 102110
```

while this one is not:

```
4x3 Puzzle 0122
```

any Qubes in direct contact with an Advantage Mark, which is created by capturing an Advantage Qube. Puzzles must be completed before they fall off the end of the grid, and without you getting crushed underneath the Qubes.

When you complete a puzzle perfectly (i.e. no missed Normal or Advantage Qubes, no captured Forbidden Qubes), you get an extra row added to the end of the grid, giving you more room to maneuver for the subsequent puzzles. When you fail, you risk shrinking your play area. You will lose one row off of the grid for each Forbidden Qube that you capture, and for every Normal or Advantage Qube that drops off the end of the grid above a certain allowable number within each wave.

You will receive points for each captured block, and if you do well you will receive a bonus at the completion of each puzzle, based on how many turns it took you to complete it (see scoring, below). You will also receive a bonus at the end of each stage, based on how many rows you have left on the playing field.

```
~~~~~  
2.3 RULES OF PLAY  
~~~~~
```

-- COMPLETING PUZZLES --

To successfully complete a puzzle, you must capture all Normal and Advantage Qubes before they fall off the end of the grid, while leaving all Forbidden Qubes intact. If you accomplish this, you will receive a 'Perfect' and an extra row will be added to the end of the grid.

Once you've successfully cleared all Normal and Advantage Qubes, any remaining Forbidden Qubes will continue rolling on to the end of the puzzle until they fall off. The next puzzle will not start rolling until all of the Qubes are gone. If you have nothing but Forbidden Qubes left, it can get quite tedious waiting for them to finish their journey to the end. Fortunately, you can accelerate them on their journey by pressing and holding the square button. Just make sure that you're not standing where they'll roll over you on their way by.

-- CAPTURING QUBES --

The basic move of the game, and one that you will use over and over again. First, you must mark a square on the grid by moving your player character over it and pressing X. Next, wait until the desired Qube rotates onto that marked square, then capture it by pressing X again. You can only have one marked square at a time. If you change your mind, you can un-mark the square by 'air capturing' while there's no Qube rolling onto it, then select a new square.

-- FORBIDDEN QUBES --

You must avoid capturing these black Qubes by any means. If you do happen to catch one, you will hear a horrible crash, you will lose a row off the end of the grid, and the puzzle will not be completed perfectly.

-- ADVANTAGE QUBES & ADVANTAGE ZONES --

Your best tool in a struggle against time. Green Advantage Qubes, when captured, leave a glowing green square on the grid (the Advantage Mark). If you then 'bomb' by pressing the triangle button, it will activate the advantage zone, which includes the captured Advantage Mark and all 8 squares surrounding it, as so:

```
  _ _ _ _  
|_|_|_|_|  
|_|_|_|_|  
|_|_|*|_| <--- Captured Advantage square
```

```
|_|_|_|_|
```

```
  _ _ _ _  
|_|_|_|_|  
|_|*|*|*| <-- Total captured area upon  
|_|*|*|*| <-- activation of Advantage  
|_|*|*|*| <-- Zone ('bombing')
```

Any Qubes in this zone when you bomb the grid will be captured, whether they be Normal Qubes, other Advantage Qubes, or Forbidden Qubes. This means that you can use the Advantage Zone to capture many desired Qubes all at once, but you have to be careful of its placement and timing of bombing to avoid inadvertently capturing Forbidden Qubes.

You can have more than one active captured Advantage square at one time, and when you bomb the grid, all Advantage Zones will be activated at once, creating massive capturing areas. You can also chain together Advantage-style captures, if the triggered Advantage Zone contains one of more new Advantage Qubes. Trigger the new zones either right away or at a later rotation, as the situation may call for.

-- PROTECTING QUBES --

Within an Advantage Zone, if you mark a square before bombing, that square will be protected from the triggered Advantage Zone.

```
  _ _ _ _  
|_|_|_|_|  
|_|M|_|_| <--- Marked square (protected)  
|_|_|*|_| <--- Captured Advantage square  
|_|_|_|_|
```

```
  _ _ _ _  
|_|_|_|_|  
|_|M|*|*| <-- Upon bombing, the marked square  
|_|*|*|*| <-- will not be captured (unless you also  
|_|*|*|*| <-- capture it yourself by pressing X again)
```

This is very useful if you have a Forbidden Qube that is going to roll into an Advantage Zone. Simply mark the square it will roll on to, and you can still bomb the Advantage Zone while the Forbidden Qube is shielded in this way. But remember, you will have to wait until the Forbidden Qube has rolled ahead again before you can clear your mark from the square, consuming one turn.

-- DROPPING QUBES --

If you are unable to capture Qubes in time, they will roll over the edge of the grid and be lost. If even one Qube (with the exception of Forbidden Qubes, which are meant to roll off the edge with no penalty to you) falls, you cannot get Perfect on that puzzle. If you drop more than one Qube, you could be in trouble. Each wave allows you to drop a certain number of Qubes off the end without penalty, as indicated by a string of rectangles on the bottom right corner of the screen, called the Block Scale. As Qubes drop, the Block Scale will fill up. Once it is completely full, you will lose one row off the grid for the next Qube that goes over the edge, after which the Block Scale starts again empty. This meter resets for each wave of puzzles. As the puzzles get larger, you can drop more Qubes over the edge before you start losing rows off the grid (i.e. the Block Scale gets bigger as the game progresses).

-- GETTING SQUISHED --

While maneuvering your way around a puzzle, take care to make sure that you don't end up underneath one of the rotating Qubes. If you do get squished, two major things will happen. Firstly, the puzzle will accelerate, denying you the

chance to complete it. Any remaining Qubes will be dropped off the edge, and they will count towards your allowed dropped Qube total, as measured by the Block Scale. If this allowed number is exceeded, you will lose rows off the grid accordingly. Please note that when squished, even Forbidden Qubes will add to the Block Scale counter.

Secondly, if there are any puzzles remaining in the current wave, you will be forced to do the same puzzle over again. This time, however, the over-the-block indicators that are present on the easiest play mode will be in effect for the duration of that puzzle, highlighting for you the positions of any marked or Advantage squares. If the puzzle in which you originally got squished was the last puzzle of the current wave, you will not have to repeat it (the new wave clears this effect). Similarly, if you get squished again while repeating a puzzle, you will not have to do it a third time.

-- TYPICAL ROTATION NUMBER (TRN) --

Once you've got the basics of the game down, this will become one of your primary concerns. The Typical Rotation Number, or TRN, is the number of turns that the game expects you to complete each puzzle in. It is analogous to 'par' in golf. If you complete a puzzle in more turns than the TRN, which is displayed in the upper right corner of the screen, you will receive a lower end-of-puzzle bonus than if you complete it in exactly the TRN, which in turn is less than the bonus you receive for completing it in LESS than the TRN.

The rotation or turn counter starts once you capture your first Qube, with that turn being rotation #1 (i.e. it is impossible to clear a puzzle in zero rotations). Each rotation of the Qubes adds 1 to the counter, which will change in color from blue when the current number of rotations is below the TRN, to white when it matches the TRN, to red when it exceeds the TRN. The counter will stop once the last Normal or Advantage Qube is captured (i.e. the puzzle is completed). Remaining Forbidden Qubes, as they roll to the end of the grid, do not add to the turn counter.

For the advanced player, remember that the number of rotations is everything. Your goal should be to complete puzzles in less than the TRN as often as possible, as this maximizes both your points and your I.Q. score.

~~~~~  
2.4 SCORING  
~~~~~

Within each puzzle: Capture Qube with marked square - 100 points
 Capture Qube with Advantage Zone - 200 points

After each puzzle: Completed puzzle over TRN - 1,000 points "Perfect"
 Completed puzzle on TRN - 5,000 points "Brilliant"
 Completed puzzle under TRN - 10,000 points "True Genius!!"

After each stage: For every row remaining on grid - 1,000 points
 up to maximum of: 27,000 (1st Stage)
 39,000 (3rd Stage)
 40,000 (all other Stages)

In addition to your mundane points, at the end of the game (either through clearing the final stage or dying) you will be given an IQ score. This score will be based on your points total, number of stages cleared, difficulty level, and proportion of puzzles cleared over, on, or under the TRN. The manual says that the maximum IQ is 999, but this is a virtually unachievable score (without using massive cheats, anyway). Do not confuse your IQ score in the game with the Intelligence Quotient score known in other realms, though there may very

well be some correlation, seeing as how success in this game depends on your ability to recognize and mentally manipulate patterns in space.

~~~~~  
2.5 TIPS & TRICKS  
~~~~~

**Note: In the puzzle solutions throughout this guide, the cheat-like strategies listed under "Tricks" below will not be used.

~~~~~  
~~ TIPS: ~~  
~~~~~

These are basic strategic approaches to maximizing your performance within the intended limits of the game.

1. Once you see a puzzle, you can pause the game and strategize how you're going to approach it. The problem with this is that the puzzle vanishes while the game is paused (all Qubes appear as Normal Qubes), so you have to quickly get the puzzle layout set in your mind's eye before you do this.
2. One big mistake that beginners can make is to start capturing with an obvious Qube in the front row. To beat the TRN, you'll need to start capturing deep in the puzzle, either with an Advantage Qube, or any Qube isolated behind one or more Forbidden Qubes that couldn't be captured with any Advantage Qube. Only capture the single Normal Qubes up in front while you're waiting for deeper Advantage Zones to move into position.
3. Look at the puzzle as a whole and check for places where you can string Advantage Zones together, i.e. where you bomb a Zone to capture a new Advantage Qube, and use that one to capture even more either in the same rotation or the next, to clear out large swaths of Qubes in one go.
4. Use your ability to protect squares in an Advantage Zone strategically, e.g. to capture several Qubes when a Forbidden Qube is at risk. This is best used as a final move in a puzzle, though, since you lose a turn waiting for the Forbidden Qube to roll off of your marked square before you can trigger that mark to release it and place a new one somewhere else.
5. When you first start playing I.Q., the higher stages (especially 6 and up) will be quite difficult. Rather than trying to clear puzzles entirely, concentrate on first making a path for yourself down one side of the puzzle so that you don't get squished or pushed off the edge of the board. If you have time and space left over after that, then you can go back and capture more of the remaining Qubes. Once you've gained more experience, you can make getting Perfect your goal on every puzzle.
6. One skill to master in order to become really advanced is to line up different Advantage Zones with respect to the positions of Forbidden Qubes around them. For example, look at the following puzzle:

[_][_][X][_][_]	[_] = Normal Qube
[_][_][X][_][_]	[*] = Advantage Qube
[X][X][X][_][_]	[X] = Forbidden Qube
[*][X][X][X][*]	

The Advantage Qube on the left side has to roll ahead 3 times once captured before you can bomb it (one roll to be in line with the Forbidden Qube in front of it, then twice more to be clear to bomb). The Advantage Qube on the right,

however, is already directly beside a Forbidden Qube, so only needs to roll twice after being captured before you can bomb it. You want to line up both Advantage Zones so that they are both in line with a Forbidden Qube at the same time, so that they can both roll ahead twice and bomb at the same time. So, for this puzzle, you would capture the left Advantage Qube, then the right one on the next rotation, then let both roll ahead twice and bomb to clear all of the Normal Qubes. In later puzzles, you will sometimes get the chance to line up 3 or 4 Advantage Zones in this way to bomb large numbers of Qubes at once.

7. Use the time it takes to capture Qubes to extend the amount of time you have between each rotation. For example, suppose you have to run around a large group of Forbidden Qubes to get to the next Qube you need to capture. If in a turn you are both capturing with your single mark and bombing with an Advantage Zone, do them one after another instead of at the same time to give you a little more time to reach your destination (i.e. Bomb while running, then activate your single mark once the puzzle is about to start rotating again, giving you more time to keep running to your destination while that Qube is being captured before the puzzle starts rolling again).

8. While a new wave of puzzles is rising from the platform surface, you can check where the new puzzles will start by marking squares. If the mark appears in blue as normal, that row is ahead of where the puzzles will start, and it's safe to stand there. If the mark is invisible (but you still hear the sound effect of marking a square), then that row will be part of the new puzzles, and you need to back up before it rises. Just be sure to clear any marks made in this way before a puzzle becomes active, or you may accidentally capture a Qube that you didn't mean to.

~~~~~  
~~ TRICKS: ~~  
~~~~~

These exploit what are likely bugs or holes in the game design, and probably weren't intended to be possible by the game designers. But since they work and they're fun, why not give them a shot? Just remember that the puzzle solutions listed below do not include any of these proto-cheat techniques.

1. When you capture a Qube with an Advantage Zone, you get 200 points, instead of the usual 100 points from capturing just with a marked square. If you trigger a normal marked square at the same time as you bomb an Advantage Zone, however, the Qube that is captured will also be counted for 200 points. This is true even if the Advantage Zone doesn't capture any Qubes itself. To do this, just press Triangle and X in very rapid succession or simultaneously within the same rotation.

2. If you clear a puzzle and still have an untriggered Advantage mark, that square will remain on the grid (unless it is on a row that turns into part of a puzzle at the start of a new wave), and you may be able to use it in the next puzzle that rolls along. Check out the new puzzle as soon as it starts in the area where your leftover Advantage mark would end up. You may be able to clear a few extra Qubes at the same time that you start on another part of the puzzle. Just watch out for times when the leftover Advantage square is too close to the start of the new puzzle to be able to judge whether it'll be useful in time, and also watch out for times when waiting for the new puzzle to reach the leftover Advantage mark would put it too close to the edge of the grid to finish it. Bomb to clear the leftover Advantage square before starting on the new puzzle if it isn't going to be of any use.

3. Sometimes, it pays to let yourself get squished and repeat the current puzzle, but only if A) the puzzle contains no Forbidden Qubes, and B) you are

the third, fourth, etc. if necessary), with each row separated by "-".

For each puzzle, the arrangement of Qubes at the outset will be provided such as in the following diagram, where:

[_] = Normal Qube
[X] = Forbidden Qube
[*] = Advantage Qube

EXAMPLE ONLY

4x4 Puzzle 0021

Rotations: X/Y <-- This refers to the number of turns used in the solution provided / the TRN (the game's expected number of turns).

4 [_][_][_][_] R1. Capture 1c.
3 [_][*][_][_] R2. Capture 1d.
2 [X][_][_][_] R3. Bomb.
1 [X][X][*][_] R4. Bomb.

a b c d

The rows are numbered, and the columns are labeled with letters, providing coordinates for every Qube. 'R1.' refers to the first rotation (which begins when you capture your first Qube), 'R2.' is the second rotation, etc., and the actions that should be performed in each rotation will be clearly identified. I will use the following terminology in descriptions:

Capture: Mark and capture that Qube (or just capture if the spot is already marked). Note that you must place the mark before the Qubes roll, i.e. at the end of the previous rotation.

Mark: Place your mark with the X button, but don't capture anything in that square just yet.

Bomb: Use the Triangle button to activate all current Advantage Zones.

Wait: Don't capture anything on that turn. It usually means that you are waiting for a particular Qube to roll onto a marked square.

**NOTE: The game will also randomly reverse the puzzles left to right. So if you can't find the correct puzzle in this guide, just flip the directions and you'll be able to locate it.

For example: 4x6 Puzzle 1211-1110 becomes 4x6 Puzzle 1121-0111 when reversed.**

I believe that this will provide clear directions for solving every puzzle in the game.

DISCLAIMER: These solutions are only one way that I have solved the puzzle. Of course, many puzzles have multiple perfect solutions. Where possible, I have included a solution that take less than the TRN, but this is not possible for many puzzles (and for some, I just haven't figured it out yet). If you have a better solution to a puzzle that I have not beat the TRN for, without using any of the 'cheats' as described in the tricks section above, please send it on to me (see bottom of document for my contact information). Full credit will be given for any contributions.

Solutions will only be given using the methods that follow the rules, i.e. without using any of the tricks listed above (e.g. leaving an Advantage Zone marker from a previous puzzle, marking and capturing more than 1 square in a turn, holding the acceleration button while capturing the last Qube, etc.), as these are not consistent, reliable methods and may be considered 'cheating'. That doesn't meant that you can't use them, but I won't include them in solutions here.

(You can take an extra turn or two if you can't

This section is for those who don't have the manual and just can't plain figure things out on their own. Why isn't it placed near the start of this guide, with the other gameplay information? Well, I added it late in the creation process, and didn't feel that it was important enough a section to place before the puzzle solutions and change all the section numbering as a result. Give it a quick scan just to make sure that you didn't miss any features in the game that you didn't know about.

~~~~~  
4.1 MAIN MENU  
~~~~~

-- 1-P --

Obviously, this starts the 1-player game.

-- 2-P --

Choose this to begin a 2-player competitive game. The way this works is, each player takes a turn with a puzzle of a certain size, and must complete it perfectly to win a point (perfect, in this case, means simply capturing all Normal and Advantage Qubes, no Forbidden Qubes, and not getting squashed. The number of turns used to complete the puzzle doesn't matter.) Then, if the first player succeeded, the second player gets a different puzzle to attempt. If a player fails to complete a puzzle perfectly, the other player receives the same puzzle to try again.

After 5 rounds (each round consisting of a turn by each player), if a player is leading by 2 points or more, they win. If not, then the game continues until one player has scored two points in a row over the other player. If, after 10 additional rounds once this 'Deuce' condition is reached, neither player has won, the game is a draw.

Personally, I find the 2-player game terribly dull, since skill at completing a puzzle in the fewest turns does not come into play at all. Maybe if you're both relatively newbie players, it could present a challenge, mostly on the higher play levels, and only because you have a limited amount of space on the grid behind you.

You can choose the difficulty of the puzzles at the outset. Within each difficulty, the puzzles will roll at the speed set under 'Game Mode' in the Options menu (see below). The size of the puzzles in each mode are as follows:

Level 1: 4x4 to 4x6 puzzles.

Level 2: 5x6 to 5x8 puzzles.

Level 3: 6x7 to 6x9 puzzles.

Level 4: 7x7 to 7x9 puzzles.

Level 5: 7x7 to 7x9 puzzles (to differentiate this from level 4, I think that you have less room on the grid in which to complete the puzzles).

During the 2-player game, hit Start at any time to bring up the pause menu, from which you can exit back to the main menu once you're bored.

-- RULES --

If you're new to I.Q., I suggest checking out the fully voiced and animated instructional videos, even if you've already read the manual. Do them in order, too, as they build on each other, and watch all 3 demos to get a taste of what's in store for you. More games ought to come with something like this. The only thing it doesn't teach you is about protecting Forbidden Qubes from Advantage Zones by placing a mark underneath them.

-- OPTIONS --

This will open the options menu, explained below. Most of the time, this will be your first stop upon loading the game disc.

```
~~~~~  
4.2 OPTIONS MENU  
~~~~~
```

-- CONTROLLER --

Here, you can customize which buttons do which tasks (mark, capture, bomb, and accelerate) during the game. There is also an option to return to the default setting, in case you changed things and can't remember how they were originally supposed to go. Note that Mark and Capture can be assigned to the same or to different buttons, but Bomb and Accelerate must always have their own dedicated buttons.

-- GAME MODE --

Press up/down to choose between 'System' and 'Level', then press left/right to change the setting within each category. First, 'Level' is where you set the difficulty of the game. As the level increases from 0 to 4, the Qubes roll faster, and you have less of a pause after capturing a Qube before they start rolling again.

Under 'System', Normal lets you play the game as it was meant to be; Original (which only becomes available as an option once you've completed a game past the final stage) lets you make your own puzzles. Once you've selected this option, go back to the main menu and choose the 1-P game. A puzzle design screen will appear, with a yellow cursor. Click on the top left box to select a different 'Group', which simply means one of the pre-made puzzles (use the X button to increase the group number, and the O button to decrease it). The box next to this, with numbers for X & Z, defines the puzzle size. Click on this to open a window with all of the available puzzle sizes, then select one to be able to edit the groups within that size.

Now, with the puzzle you want to work with selected, you can change each Qube individually by clicking on it, scrolling through Normal, Advantage, and Forbidden each time you click. Down the right side of the screen, 'CLS' will make all Qubes within the current group the same color (and again, scrolling through Normal, Advantage, and Forbidden). 'Copy' remembers the current configuration of the puzzle, and 'Paste' will change any other puzzle to the last one stored (if the current puzzle is of a different size than the one stored, this function will change only the portion of the current puzzle starting at the top left corner to match the stored one).

Finally, once you're happy with your editing, you can 'Save' your work (though it takes a whopping 8 blocks on a PS1 memory card!), or you can just go ahead and 'Play' it. If you have a saved body of puzzles already, you can also 'Load' it from here and 'Play' it, or edit it further.

To exit from this mode, you must select 'Play', then pause the game and exit using the Pause menu (see below).

Personally, I think the original mode is somewhat useless. First of all, the puzzles are still randomly selected from each size grouping, so the chance of any particular puzzle showing up within its proper size grouping is 1 in 200, so unless you're really serious about making an entire set of your own puzzles, it won't be much different from playing the normal game. Also, in Original mode, there is no TRN, removing an important element of strategy from the game. My verdict: don't waste your time.

-- RANKING --

Here, all of your top scores are stored (assuming that you remembered to save you game after playing). When you complete the game (either by clearing the final stage, or by dying), you receive your score and are given the chance to input your name. If you made it onto the top 10 for the difficulty level you were playing on, it'll show up here. The ranking lists both your raw score and your I.Q., but the order is based strictly on the I.Q. value. (It is possible to get a higher I.Q. with a lower score, since your I.Q. is modified by your performance against the TRN).

Press the L1 and R1 buttons to move between the high score listings for the 5 difficulty levels, and press up and down to see the entire top ten list within each (since the screen only shows 7 of them at a time). Press X or O to exit back to the options menu.

-- MEMORY CARD --

This should be your first stop upon loading the game disc, if you want to access any players other than the default that you may have unlocked, or if you want your score to go onto the same board as any others you may already have achieved. Press left/right to select the memory card slot with your save file (or where you want to put it), and press up/down to highlight Save or Load, choosing them with the X button. You get a confirmation window (Yes/No) when you choose one, just to make sure that you don't overwrite something without meaning to.

-- TEXTURE --

This refers to the color pallet for the Qubes and grid. There are 5 sets of colors/patterns, and within each one, the color changes for each stage of the game. A couple of the darker ones can make it difficult to differentiate raised Qubes from the flat grid on certain stages, so try them all out to find out which ones give you trouble. My favorite texture is 04. Now you know.

-- PLAYER --

There are multiple playable characters in this game (though not nearly as many as in the Japanese and European releases of the game). The default is Eliot. After completing the final stage with him, you unlock Cynthia, who runs slightly faster. Complete the game again with her to receive Spike, who runs (or trots) even slightly faster again.

-- EXIT --

Choose this to return to the main menu. All of your settings will be maintained when you then select to start the 1-player game.

~~~~~  
4.3 PAUSE MENU  
~~~~~

Press Start at any time while a puzzle is in play to halt the game and give you the following options. Please note that the current puzzle switches to all Normal Qubes while it is paused, so you can't use this to get a free look at the puzzle while it isn't moving.

-- CAMERA --

There are 3 choices, which you can toggle between by pressing left/right while this option is highlighted. Bring up the one you want before resuming the game. The cameras differ as follows:

Camera 1: Swings left and right in the direction that you move, letting you see the right edge of the puzzle when you move to the right edge of the platform, and the same for the left. This feature is useful when you have a mark along one edge of the grid and have lost track of its

```

[_][_][_][X]
[_][_][_][_]
[X][*][_][_]
[X][X][_][_]
[_][X][_][*]

```

could be converted to "1012 0011 0211 1111 1112" (breaks between strings of numbers indicate new rows in the puzzle). But I also had find a way to input these puzzles in a way that would allow me to place them in order, without just having an unwieldy list of two hundred randomly assorted puzzles to then go through one by one and order them properly. When I started with the smaller puzzles, I accomplished this by creating a table that would allow me to group together puzzles that shared identical front rows, while putting them in order according to their front row. For example, the table here:

	00	01	02	10	11	12	20	21	22	<--first two Qubes in front row
00										row
01										
02										
10										
11										
12										
20										
21										
22										

^^
 ___ last two Qubes in front row

A puzzle with a front row composed entirely of Advantage Qubes would go into the bottom right corner box, while a puzzle with a front row composed entirely of Normal Qubes would go in the box in the dead center.

Using such a table, I would scroll through the puzzles numbered 0 to 199 in Original Mode for a particular puzzle size, look at the front rows, and place the puzzle number into the appropriate box in the table. Once this was complete, I had all puzzles with the same front rows grouped together. I could then take one group of puzzles, scroll through the Original Mode list for those puzzle numbers, and convert the puzzles to numbers in entirety, then do the same for the next group of puzzles with the same front row in order. Of course, within any one of these groups, there could have been anywhere from 1 to 10 or more puzzles, but once I had them all converted to numbers within a group, I could then re-order that group perfectly. In this way, I only had to deal with ordering small numbers of puzzles at a time, rather than an unwieldy list of 200 puzzles.

This method became more challenging as the puzzle sizes grew, however. The example table above was only useful for puzzles that were four Qubes wide. When I got to five Qube wide puzzles, the table had to triple in size, as either the top or side header row/column now had to include all permutations of three Qubes (the remaining two Qubes in the row of five were accounted for in

the other header row/column), i.e. one of the table dimensions now had to include spaces for the values 000, 001, 002, 010, 011, 012, 020, 021, 022, etc. This was still achievable without completely ridiculous effort up to six-Qube wide puzzles, though in filling out the table I had to do a lot of scrolling up/down and left/right to find the appropriate boxes on my monitor display. When I hit the seven-Qube wide puzzles that populated the last three stages of the game, I knew that I had to find a better way.

Then it hit me, and I had to kick myself for not using this method from the very start. I inputted the puzzles converted to numbers directly into a Microsoft Excel spreadsheet. I was then able to use the software to place all of the puzzles in perfect numerical order automatically, saving me three complete steps compared to my previous method (I no longer had to list the puzzles by puzzle number, search the puzzle list for the puzzles that I had identified as having the same front row, and then order them manually once I had converted them). To circumvent the problem of the software automatically eliminating any zeroes that began a coded puzzle (i.e. '001' being read as solely '1'), since in this case zeroes were a significant digit, I placed each number in a separate box in a row on the spreadsheet, and placed a blank box between each row of the puzzle to make it easier for myself to read when I copied the coded puzzles into my text editor (which incidentally, was Metapad, available at www.liquidninja.com/metapad - it's small, it's fast, and it has a lot of great features to make game FAQing easier). I still attached the puzzle numbers as found in Original Mode to each coded puzzle in my spreadsheet, so that I could refer back to the source if I thought that I may have made a typo in a particular puzzle. By coming to use this method, I saved myself countless hours in converting the largest puzzles in the game.

At this point, I now had massive lists of numbers (divided into blocks of four to seven digits, separated by spaces within a row) at my disposal, with 200 entries for each of 17 puzzle sizes (minus a few that were complete duplicates for the smaller puzzle sizes). On their own, these strings of numbers would not be very useful to my guide users, so I then had to convert these into the visual diagrams of the puzzles that were used in the solution listings above. Making this conversion was fairly easy, though still quite time-consuming. For each puzzle size, I would make a blank template, such as follows:

```
-----  
5x6 Puzzle                                     Rotations:  
-----  
  
6  [_][_][_][_][_]      R1.  
5  [_][_][_][_][_]      R2.  
4  [_][_][_][_][_]      R3.  
3  [_][_][_][_][_]      R4.  
2  [_][_][_][_][_]      R5.  
1  [_][_][_][_][_]      R6.  
                                R7.  
  
   a  b  c  d  e
```

I could then copy and paste this template 200 times, once between each coded puzzle number string in my list. I would then use the number string to graphically fill in the blank puzzle, placing an 'X' in boxes corresponding to zeroes in my coding (for Forbidden Qubes), and '*' in boxes corresponding to twos (for Advantage Qubes). Boxes for ones (for Normal Qubes) were left as is. I would also fill in the unique puzzle code in the header above the puzzle to identify it and make it possible to search for it in the guide by either scrolling or using the 'ctrl+F' search function, eliminating any blocks of numbers in my coding that were not necessary for complete differentiation from other puzzles (e.g., if there were two puzzles as follows:

01221 11111 11111 00121 00111 00111

01221 11112 11111 21010 11101 11111,

they would only need to be listed as "5x6 Puzzle 01221-11111" and "5x6 Puzzle 01221-11112" to completely differentiate them). After repeating this three thousand and four hundred times, all of the puzzles were finally mapped out and on display. After that, it was easy to decide how to describe each step in the puzzle solutions (using terms such as 'mark', 'capture', 'bomb', and 'wait'). Now the fun part could begin...

Hypothetically, I could have written out the steps in solving the puzzles simply by working them out from my diagrams. But these solutions would still be missing an essential piece of data: the Typical Rotation Number, or TRN. It was vital to learn the TRN for each puzzle in order to determine if any particular solution was worthy of 'True Genius', 'Brilliant', or merely the lowly 'Perfect' status (by solving the puzzle in less turns than, equal to, or more turns than the TRN, respectively), and this figure could only be obtained by playing the game in 1-player mode over and over (and over, and over) again in order to see all (or almost all) of the puzzles. Also, after having played the game for so long, I was more likely to see the best solution by playing through a puzzle, trusting my instincts on how best to start it off. So I set out to completely burn myself out on Intelligent Qube (and it worked - until the day I submitted this update, I hadn't touched the game since I first submitted the guide!).

As I played, as each puzzle appeared, I would quickly commit the front row to memory, mentally convert it to my numbering system, and then I would search through my in-progress guide to find the puzzle(s) that corresponded to that size and front row coding. Most of the time, I would then have to unpause the game briefly to look at the puzzle again in order to take in the next couple of rows, so that I could locate the exact puzzle in my listing. I would then take a final glance at the puzzle in-game and pause it once more, just to confirm that the puzzle in my listing was indeed a perfect match. At this point, I would record the TRN. Next, using first my diagram of the puzzle, I would try and figure out the best place to start capturing Qubes. I would then unpause the game and start doing it for real. If my initial instincts were fruitful, I would hopefully achieve True Genius status for that puzzle, and I would then type out the complete solution into my guide, preserving those most perfect of scores. If I was unable to achieve True Genius, then I would often leave the puzzle solution blank for the time being, after recording the TRN, so that I could go back to the puzzle later on and try to develop a better solution later. For especially tricky puzzles, I would often at least type out the first couple of moves if I was able to achieve at least Brilliant status, so that I would have a foundation to work from later on. If I did this, it was only because I was confident that my experience with the game would allow me to recreate the rest of my solution after the first few steps, knowing that success in solving the puzzles expediently weighs heavily on how well you started off.

Occasionally, I would come across a puzzle in the game that did not perfectly match with my diagram. This was due to the occasional error in either my initial coding of the puzzle, or in converting my code to the diagrammed puzzle illustration. Fortunately, this would not happen often, and I could simply correct the error in my diagram. Very seldomly, I would find a puzzle in-game that I did not seem to have a diagram for at all. This was likely due to an error in coding in the first one or two rows of a puzzle. In these cases, I would carefully map out the puzzle based on the on-screen version and add it to my vast database. Also, I would occasionally come across a diagrammed puzzle that seemed impossible to complete, due to erroneous Forbidden Qube placement. In those cases, I fortunately had kept my lists of coded puzzles with the puzzle numbers as used in Original Mode still attached, so I refer back to the

source to correct my errors.

In order to learn as many of the puzzles' TRNs as possible, it was necessary to play the game a LOT. Remember that for each play-through, only a limited number of puzzles of each size are seen. For example, you will only see a total of four 6x8 puzzles during one round of the game (two each in waves 1 and 2 of the sixth stage). So even in an ideal situation, you would need to play this stage fifty times in order to see all 200 puzzles. But in reality, the puzzles are selected randomly each time from the entire set of 200. If you have any awareness of the laws of probability, you would know that it could take a loooonnnggg time before every single puzzle were displayed at least once. So, in an attempt to preserve my sanity, I would play a single stage over and over again by selecting 'Start Over' from the pause menu when I reached the end of the stage (and before the next one began) in order to focus on only one or two puzzle sizes at a time. For example, if I was working on the 5x7 and 5x8 puzzles, I would start a new game, play up to stage four, and then re-start stage four whenever I had just completed the second puzzle in the fourth wave (though if I already had a solution for that puzzle, I could restart as soon as I had identified it as such). I started by doing the smaller puzzles first and working up to the larger ones. One could argue that it would have been more time-efficient to deal with the largest puzzles first, because once I had finished with them I would no longer need to play as far as that stage, but I felt that I would do better to ease into producing the larger and larger solutions gradually.

Now, thanks to those same damned laws of probability, the more puzzles that I finished (i.e. obtained the TRN and at least attempted to find a True Genius solution) within a certain puzzle size, the less likely it would be that I would keep finding new puzzles to solve. So my rate of filling out the solutions in this guide exponentially slowed as I progressed within each puzzle size. At some point, I would copy down on paper the puzzle identifier codes that were remaining, to save me the time that it would take to scroll through my guide as each puzzle appeared during gameplay to see if I had already solved it or not. This point usually came when there were perhaps fifty or sixty puzzles remaining. Eventually, there would come a time when I would have only ten to fifteen unsolved puzzles in that puzzle size, and it seemed that no matter how many times I repeated the stage, I was never fortunate enough to come across these puzzles. In producing a guide of this magnitude, I had to acknowledge my limitations, and I had to accept that a small selection of puzzles would remain without a confirmed TRN. For these puzzles, I still typed out a reasonably expedient solution, but I cannot truly judge how they stand up to the TRN.

After all of that, it was easy to compose the remaining sections of the guide, covering gameplay, options and the like. All in all, this guide took me approximately eight months to complete, though I certainly was not working continuously during that span of time. I had to try to maintain some semblance of a life, after all. Again, it may have been crazy of me to even attempt this, but it was in my head for a long time, tormenting me, and the challenge of such a massive undertaking intrigued me as an experienced video game guide writer who aims for total completion in my work. And at the end of it all, I felt compelled to lay out my creation process, much in the same way that many artists in more recognized mediums will describe their methods and sources of inspiration to anyone who will listen, on the off chance that others may find inspiration or ideas for their own ventures.

As a final word, I would just like to talk about how after submitting my guide for posting (and I had no doubt that it would be posted, as I knew that it met all of GameFAQs quality standards and was a unique offering for a game that had virtually nothing posted for it), I then had to face the possibility that no

one would ever look at or use it, especially due to the age of the game. Such an event wouldn't be devastating, since I wrote the guide primarily for my own benefit, but it would still be somewhat disappointing. My fears proved unfounded, however, as the guide has received a few hits daily since it hit the web. I also received one comforting e-mail from a fellow gamer who relaid a story about how she once drew out all of the levels from Ms. Pac-Man in crayon, and that she could relate to the passion for order and completion that drove this body of work. So after this experience, I have decided to dedicate this guide to all those people out there who religiously alphabetize their video games and other media collections, and who otherwise harbour the occasional obsessive-compulsive impulse. Please take comfort in knowing that you are not alone.

~~~~~  
5.3 CONTACT INFO  
~~~~~

I hope that you enjoyed this guide, and that it was able to help you improve your game a bit (or a lot!). If you want to send me additional puzzle solutions or other comments or suggestions, please feel free to do so at:
syonyx_faqs at yahoo dot com

NOTES ON SUBMISSIONS:

-I am only interested in puzzle solutions for puzzles in which I did not already list a 'True Genius' solution. All solutions must not contain any 'cheat' techniques to solving them (i.e. they must mark and/or capture only 1 Qube per turn, excluding Advantage Zones, and each turn must be counted) to make it into this guide.

-Also, you may have noticed some puzzles with the number of rotations listed as #/? (e.g. "12/?"). These were the puzzles that, no matter how much I played the game, just never came up to let me see what the TRN is. For these, I listed a reasonably expedient solution, but I can't guarantee that it meets or beats the TRN. If you come across any of these puzzles and would like to pass the correct TRN on to me, that would be greatly appreciated.

-And finally, I cannot guarantee that this guide is completely without errors. It would take superhuman typing skills to fill in the solutions for 3400 puzzles without mis-typing a letter or number once in a while. If you come across any glaring errors (like if I indicated to capture a Forbidden Qube), please bring them to my attention.

AND A LITTLE SHAMELESS SELF-PROMOTION:

I am an avid video game guide writer, and have produced comprehensive guides to many works, with a predilection for somewhat obscure titles on the Sony Playstation. Please see my entire body of work at:

<http://www.gamefaqs.com/features/recognition/35729.html>

Thanks for your patronage. If you want some general advice, don't smoke, eat decently and exercise once in a while. You'll be glad you did when you're 80

and still loving life (and still gaming). This public service announcement has been brought to you by the letter E.
