

~~~~~

The Monster Collection is a book (Valuable) that shows you the stats of monsters previously fought, thus allowing you to know their strengths and weaknesses. This is a great improvement over the previous Tales games since they do not include such a feature and thus render any attempts to fully understand the monsters in the game impossible.

Whenever you need to refer to the Monster Collection, just enter the item menu and select the valuables sub-menu, and use the Monster Collection in the valuable list like you would use a normal item. The data in the book will be displayed in numerical series and you will be able to get whatever info you need by scanning through the pages.

This wonderful item can be acquired quite early in the game and thus allow you to make full use of it as soon as possible. To get it, after Prof. Mazet sends you to Undine Stream to get the cooperation of Undine, return to him and he will present this book to you.

~~~~~

3. Explanation of terms

~~~~~

- No.

This is the number of the monster as displayed in the Monster Collection book. It starts from 0 and ends at 255, totalling 256 monsters.

- Name

This is the name of the monster as used in the game. Names with a (\*) are monsters that are either bosses, sub-bosses or those that you can only fight a limited number of times.

- HP

This is the amount of hitpoints or life the monster has. HP values listed in this FAQ are for normal difficulty monsters, for hard difficulty, this value is increased by 20%, for hardcore difficulty, this value is increased by 50%.

- EXP

This is the amount of experience acquired by defeating the monster. Experience gained decreases as your level increases and thus you may not get the amount of experience listed in this FAQ when you defeat a monster.

- Gald

This is the amount of gald acquired by defeating the monster.

- Attack

This is the attack value or strength of the monster. The higher this value is, the higher the amount of damage it can deal to your characters. Attack values listed in this FAQ are for normal difficulties monsters, for hard difficulty, this value is increased by 20%, for hardcore difficulty, this value is increased by 50%.

- Defense

This is the defense value of the monster. The higher this value is, the lower the amount of damage you can deal to it. Having a defense value of 0 does not mean that you can deal a lot of damage to the monster.

- Intelligence

This is the intelligence value of the monster. It affects the damage of

the spells of the monster, if it has any. The higher the value, the higher the damage the monster's spells can inflict. Intelligence values listed in this FAQ are for normal difficulty monsters, for hard difficulty, this value is increased by 20%, for hardcore difficulty, this value is increased by 50%.

- Items

This shows the items that the monster can drop when you defeat it and any items that you can steal from it. The higher the percentage, the greater the chance of acquiring it by defeating it or stealing from it. To steal from a monster, use Chat's Rover Tool skill on the monster.

- Attack Element

This shows the element of the physical attack of the monster. By equipping equipment that increases your defense against the particular element, you can decrease the damage that the monster can inflict on you physically. If the monster's attack has no element, then this will not be shown.

- Elemental Defense

This shows the monster's resistance to the various elements. By knowing this, you can use spells to your advantage by using elements that hurt it more and prevent from using spells that will not have much effect.

As the actual percentage of the monster's elemental defense is quite hard to say for sure, I used a system of my own to show their strengths and weaknesses:

- 5: -100% resistance, -4: -99% to -75% resistance, -3: -74% to -50% resistance
- 2: -49% to -25% resistance, -1: -24% to -1% resistance
- 1: 1% to 25% resistance, 2: 26% to 50% resistance, 3: 51% to 75% resistance
- 4: 76% to 99% resistance, 5: 100% resistance

If the monster has 0% resistance for an element, then this will not be shown for that element.

- Location

This provides a possible place to find the monster. Usually, only the place with the highest encounter rate or the first place to find the monster will be shown.

In addition to the terms used above, I will sometimes include my own notes for some of the monsters in the list. Also, monsters have accuracy and evade just like your characters do, but they are not shown as those values are not given in the Monster Collection book. Same as attack, defense and intelligence, accuracy and evade increases in hard and hardcore difficulty.

~~~~~  
5. Conclusion
~~~~~

This ends my FAQ on the Monster Collection book. People may ask why I wrote this FAQ, that's because I've seen many people asking about the locations of various monsters in the GameFaqs Message Boards, so I've decided to write this FAQ to let these people have a place to find what they need. You can find me going by the name 'Red Star' on the GameFaqs Message Board.

Oh, and not to forget, the people who make this FAQ possible:

- Namco ([www.namco.com](http://www.namco.com)), for this great game!
- the people on the GameFaqs Message Board, for providing help with some of the monster data (Maxwell's stolen item, location for the hard to find Insect Plant, etc.)
- CJayC, for posting this FAQ on his GameFaqs site ([www.gamefaqs.com](http://www.gamefaqs.com))
- and finally, YOU! Thanks for giving me your attention and for reading this FAQ of mine! Hope that it has been able to give you whatever help you need!
