MAIN MENU

Press the **START button** on the Title Screen, and then you can start a new game or load a previously saved game. (See "Saving and Loading" on page 2.) You must have a memory card (8MB)(for PlayStation®2) with 110KB of free space in MEMORY CARD slot 1 in order to save your progress.

You will then be taken to the Main Menu. Use the **directional buttons** to highlight an option (listed below), and then press the **X button** to select it.

Original Mode

Defeat your enemies and collect the Dragon Balls! If you find them all, maybe you can make a wish...

Dragon Summoning

Once you have collected all the Dragon Balls, enter this mode to summon Shenron. He only grants one wish at a time, so choose carefully!

Z Survivor

You can win some great prizes here, but you'd better be ready to fight for them! Each fight is more and more difficult, and there is no normal health recovery after a battle. How many wins in a row can you manage?

Customize

Here you can create and edit your custom characters. Choose your new powers wisely, because there is no going back after you have made a decision...

Versus Mode

Challenge your friends to prove that you are the strongest warrior of them all!

Training Mode

Sharpen your fighting skills here. Having trouble executing a certain devastating special attack? This is the place for you to work on it.

Options

Change a number of game settings, including opponent strength, controller configuration and more. (See "Options Menu" on page 8.)

HUD (HEADS UP DISPLAY)

Most of *Super Dragon Ball Z* takes place on the battlefield. Information is presented via the HUD (Heads Up Display). The HUD has several components: Health Gauge, Ultimate Gauge, Action Bar, Time remaining, Dragon Radar, and Rounds Won.

Health Gauge

In each character's display, the top (yellow) bar displays the level of the character's current health. As the character suffers damage, the Gauge reduces. When the yellow bar disappears, the character is knocked out (K.O.) and loses the battle.

Ultimate Gauge

Directly below the Health Gauge is the Ultimate Gauge. This gauge builds up as you successfully land punches, kicks, and special attacks on opponents. Using super attacks and some other special moves will deplete your Ultimate Gauge supply.

Time

This is the battle's time limit. When the time reaches zero the battle will end, and the character with the most health will win. You can modify the time limit for Versus and Original battles in Game Options (see page 8).

Dragon Radar

The circle at the top of the screen is your Dragon Radar. The Dragon Radar will let you know how many Dragon Balls you have collected.

Rounds Won

Immediately below the Dragon Radar are the Rounds Won indicators. When you win a round, an indicator will fill up with a red light.

ORIGINAL MODE

Battle your way through seven increasingly difficult battles to gather up experience points and gain strength. You can also collect the seven Dragon Balls. Once you have collected the Dragon Balls, you can summon Shenron and make a wish. There are many different things to wish for, so see if you can discover them all!

DRAGON SUMMONING

Once you have collected the Dragon Balls, you can call forth the mighty Shenron. He grants many types of wishes, but only one at a time. Once you have made your wish, you must collect the Dragon Balls again in order to make another wish. Shenron can grant you new abilities, or even the abilities of your opponents! But, he has much more up his sleeve than just a few moves...maybe if you ask him nicely, he'll grant you access to new fighters to master!

Z SURVIVOR

This is an endurance battle in which you keep fighting opponents until you are defeated. The only catch is that you will not go back to full health before each fight, so you better be good if you want to get very far!

After you win a battle in Z Survivor mode, you can choose a prize from the Bonus Roulette Wheel.

Prizes vary from extra experience points and attack power to extra health or even a Dragon Ball. Time those button presses well, though, or you might not get exactly what you want!

CUSTOMIZE

Here you can customize characters, buy skills, or view your collection of acquired skills. **Note:** You must have a memory card (8MB)(for PlayStation™2) in MEMORY CARD slot 1 in order to organize skills.

Select Customize from the Main Menu. At the first screen, choose **Character Customization** and select the custom character that you would like to edit. (You must have already created a custom character in order to choose this option – see next page for details on creating a character). You can also view which

skills you have in your list, and purchase new skills from your skill tree using your accumulated experience points.

Create Character Card

Select this option to create a custom character card. First select the memory card slot to which you wish to save the character. Then, choose the character you would like to customize. Once you choose your character and a name, you will be asked to save your data. Select Yes, and you can now access your custom character for battle!

Erase Character Card

You can only have 30 custom character cards per save, so at some point you may choose to delete an older character to make room for a new one. Choose this selection and choose the character card you wish to erase. Confirm your selection and the character will be erased.

VERSUS

Select this mode to fight it out with your friends. You can choose Custom or Regular fighters for these battles. Once you have chosen your fighter, you can select a handicap if you and your opponent are not equally matched and you wish to even the odds. Move the indicator to the left and your attacks will do less damage. Move it to the right and your

attacks will do more damage.

Whoever chooses their character first gives the other player the opportunity to choose the battle stage.

TRAINING

Select Training if you need to work on your moves, timing or if you want to practice against a certain opponent.

First, select the character you would like to train and then choose your opponent. Once you are on the fighting field, press the **START** button to display your parameter list and select the area that you would like to train. The

selections are as follows:

Command List – Brings up a list of special moves and combos for your character.

Data Reset – Resets the Attack and Total Attack records.

Opponent – Choose between a CPU-controlled or player-controlled opponent.

Opponent Status – Set AI behaviors. You can make your AI opponent stand there and take your abuse or fight back.
